SUMMARY

Full-Stack Software Engineer focused on scalable backend architectures (Python/Django, Java/Spring Boot), asynchronous queues (Celery/Redis), and data pipelines (ETL). Practical experience deploying corporate solutions into production with Docker/Nginx and international coursework in Data Science.

PROFESSIONAL EXPERIENCE

Software Engineer Intern / Bachelor's Thesis | Pamesa Grupo Empresarial **Feb 2026 - May 2026**

- **Developed an end-to-end BI platform** integrating corporate security sources (Cortex XDR, Proofpoint, Endpoint Central) via an automated Python/PostgreSQL ETL pipeline (2,000+ daily records).
- **Optimized system architecture** using Celery and Redis, delegating data processes to background workers to reduce dashboard refresh time by 50%.
- **Designed dynamic interfaces** following SOLID principles (Django, Tailwind CSS, RBAC), enabling KPI visual monitoring and immediate anomaly detection.
- **Deployed services on corporate servers** using an isolated multi-container architecture (Docker Compose, Gunicorn) and Nginx as a secure reverse proxy.

PAM & Infrastructure Specialist (Bootcamp) | NTT DATA **Sep 2026 - Oct 2026**

- Deployed and hardened a 7-server CyberArk PAM architecture with HA, LDAP, and automated rotation.

PROJECTS

Gustomé | *React, Cloud Firestore, Stripe, OpenAI API, CI/CD* **Sep 2025 - May 2026**

- Cloud-Native Serverless architecture with real-time synchronization, declarative security rules, Stripe payment integration, AI-powered OCR menu digitization (OpenAI API), and CI/CD via GitHub Actions.

Mountain Race Management System | *Java, Spring Boot, JdbcTemplate, PostgreSQL* **Sep 2024 - May 2025**

- Decoupled MVC architecture with optimized SQL persistence via JdbcTemplate, strict referential integrity, Role-Based Access Control (RBAC), and dynamic server-side PDF generation.

EDUCATION

Universitat Jaume I **Sep 2022 - Jun 2026**

Bachelor's Degree in Computer Science (Software Engineering Track)

Università degli Studi di Milano | Erasmus+ **Sep 2025 - Jan 2026**

Master's level coursework in English focused on Data Science, NoSQL DBMSs, and Business Information Systems.

TECHNICAL SKILLS

- Languages: **Java, Python, JavaScript**
- Databases: **PostgreSQL, MongoDB, Redis**
- Tools & environments: **Docker, Nginx, Git, CI/CD**
- Web & backend: **Django, Spring Boot, Celery, React, REST APIs, Tailwind CSS**

ADDITIONAL INFORMATION

Languages:

- **Spanish** (native)
- **English** (C1)
- **Valencian** (C1)
- **Italian** (B1)

Other:

- Driving License B
